

Backend endpoints

Health

- GET /api/health
Check that the backend is alive.

Procedures (jobs like “Check oil”)

- GET /api/procedures
List all procedures / jobs.
- GET /api/procedures/{procedure_id}
Get a single procedure (title, short description, all steps).
 - Response example:
 - "id": "proc_oil_check",
 - "title": "Check Engine Oil Level",
 - "description": "Quick guide to checking engine oil level."
 - "steps": [
 - { "id": "step_1", "instruction_id": "instr_1", "order": 1 },
 - { "id": "step_2", "instruction_id": "instr_5", "order": 2 },
 - { "id": "step_3", "instruction_id": "instr_10", "order": 3 }
- GET /api/steps/{step_id}
Get one step (includes the linked instruction).
- Response example:
 - "id": "step_3",
 - "procedure_id": "proc_oil_check",
 - "order": 3,
 - "yolo_class": “engine_oil_cap”,
 - "instruction": {
 - "id": "instr_10",

- "title": "Open the oil cap",
- "body": "Turn the oil cap counterclockwise until it comes off."
- }
- }
